Door Types

DOOR TYPES

The Baystone range has 3 types of door configurations: standard, combination and split-frame. Here, you will find a brief description and purpose of each style.

STANDARD DOORS

Standard doors, are all configurations which are not listed as combination or split-frame. These are made up of separate components which can be opened and closed individually.

COMBINATION DOORS

Combination doors have a permanently fixed outside frame. The door and frame will open together.

This type of configuration is commonly used on appliances, but can also be useful for larders and cabinets with internal wirework.

SPLIT-FRAME COMBINATION DOORS

Split-frame configurations are only to be used with moulded plinth. The split-frame configurations come in two forms: combination or standard (similar to above). The outer frame of the split-frame configuration comes in 2 parts: an 18mm bottom rail and the main outer frame.

Baystone / Eildon

Cabinet Frame Installation

CABINET FRAME INSTALLATION

- 1) Attach 4 x L brackets to the door frame. These are included with the frame fitting kit (code: FFK).

- 2) Attach the frame to cabinet by screwing the L brackets into the internal side of the cabinet

- 3) Attach the door buffer to the internal side of the cabinet, behind the frame and on the opposite side to the hinges.

Baystone / Eildon

Pelmet & Moulded Plinth Guide

PELMET INSTALLATION

- 1) Position the top edge of the pelmet underneath the wall unit, and behind the cabinet frame. The cabinet frame will overhang the cabinet by 20mm which the pelmet fit into.

- 2) Attached the pelmet by screwing through the pelmet into the frame from behind.

MOULDED PLINTH INSTALLATION

- 1) Screw an 18mm packer (not supplied) to the reverse of the moulded plinth. This will bridge the gap between the plinth and cabinet legs.
- 2) Attach the plinth clips to the packer.
- 3) Position the cabinet front legs towards the front of the cabinet.
- 4) Attach plinth to the cabinet feet.

Please Note

Panels and pilasters will need to be cut to the height of the door frames when used with moulded plinth.

Baystone / Eildon

Moulded Plinth - Appliances

MOULDED PLINTH AND APPLIANCES

For appliances and pull out systems, a series of **split frame combination** doors are available. The split frame combination doors are supplied with a separate bottom rail which is to be fixed in place between adjacent units or accessories.

Please Note

On split frame larders, fix a small panel at the underside of the cabinet. This removes any visible gaps between the split frame and cabinet.

Combination split door

Split rail arrangement

SPLIT RAIL FIXING

For a standard **straight** run, the rail can be installed by using a flat bracket. Attach to bottom edge of frame. See diagram A.

A

For the end of a run, the rail can be installed by using a L shaped bracket. See diagram B.

B

Brackets are available in kit form. Code SFFK

DISHWASHER DOOR INSTALLATION

The standard dishwasher combination door should be used for dishwasher doors.

INTEGRATED SIDE HINGED APPLIANCES AND PULL OUTS

The split frame combination door sets have been designed to work with side opening appliances and pull outs i.e fridges. Please note, for dishwashers you will need to use a standard combination door.

Door Types

DOOR TYPES

The Chartham range has 3 types of door configurations: standard, combination and split-frame combination. Here, you will find a brief description and purpose of each style.

STANDARD DOORS

Standard doors, are all configurations which are not listed as combination or split-frame. These are made up of separate components which can be opened and closed individually.

COMBINATION DOORS

Combination doors have a permanently fixed outside frame. The door and frame will open together.

This type of configuration is commonly used on appliances, but can also be useful for larders and cabinets with internal wirework.

SPLIT-FRAME COMBINATION DOORS

Split-frame combination door configurations are used with moulded plinth.

The outer frame of the split-frame configuration comes in 2 parts: an 34mm bottom rail, and the main outer frame.

Chartham / Tennyson

Cabinet Frame Installation

CABINET FRAME INSTALLATION - STANDARD SETS

- 1) Attached 4 x L brackets to the door frame. These are included with the frame fitting kit (code: FFK).

- 2) Attach the frame to cabinet by screwing the L brackets into the internal side of the cabinet

- 3) Attach the door buffer to the internal side of the cabinet, behind the frame and on the opposite side to the hinges.

Chartham / Tennyson

Moulded Plinth Guide

MOULDED PLINTH INSTALLATION

- 1) Screw an 18mm packer (not supplied) to the reverse of the moulded plinth. This will bridge the gap between the plinth and cabinet legs.
- 2) Attach the plinth clips to the packer.
- 3) Position the cabinet front legs towards the front of the cabinet.
- 4) Attach plinth to the cabinet feet.

MOULDED PLINTH AND APPLIANCES

For appliances and pull out systems, a series of **split frame combination** doors are available. The split frame combination doors are supplied with a separate bottom rail which is to be fixed in place between adjacent units or accessories.

Please Note

On split frame larders, fix a small panel at the underside of the cabinet. This removes any visible gaps between the split frame and cabinet.

Moulded Plinth - Appliances

SPLIT RAIL FIXING

For a standard **straight** run, the rail can be installed by using a flat bracket. Attach to bottom edge of frame. See diagram A.

For the **end** of a run, the rail can be installed by using a L shaped bracket. See diagram B.

Brackets are available in kit form. Code SFFK

IN-FRAME BOTTOM RAIL

The bottom rail of the frame is designed to replace the need for pelmet, whilst creating a uniformed look when used with Moulded plinth.

DISHWASHER DOOR INSTALLATION

The split-frame combination door **must** be used for all dishwasher doors (including when not incorporating moulded plinth).

Please Note

The split frame combination door must be used for dishwasher doors.

INTEGRATED SIDE HINGED APPLIANCES AND PULL OUTS

The split frame combination door sets have been designed to work with side opening appliances and pull outs i.e fridges. Please note, for dishwashers you will need to use a standard combination door.
