Code	Description
SGPDFS	Drawerline dishwasher frame

- This product is to allow for the continuation of a two or three drawer pack across the face of the dishwasher.
- It is recommended that a dishwasher with a height adjustment between 815-875mm is used.
- It is recommended that the plinth is set to 155mm to allow for clearance.
- Adjacent cabinets must be pulled forward by 30mm to align with the dishwasher unit.
- On installation it is recommended to pilot drill the frame to suit the screws provided with the dishwasher, or use self tapping screws.

Cabinet Rear

Cabinet Front
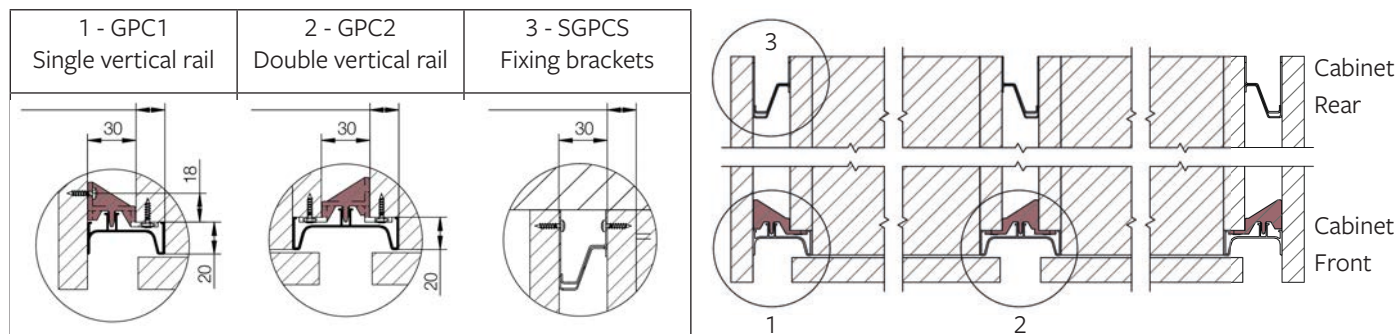

INSTALLATION
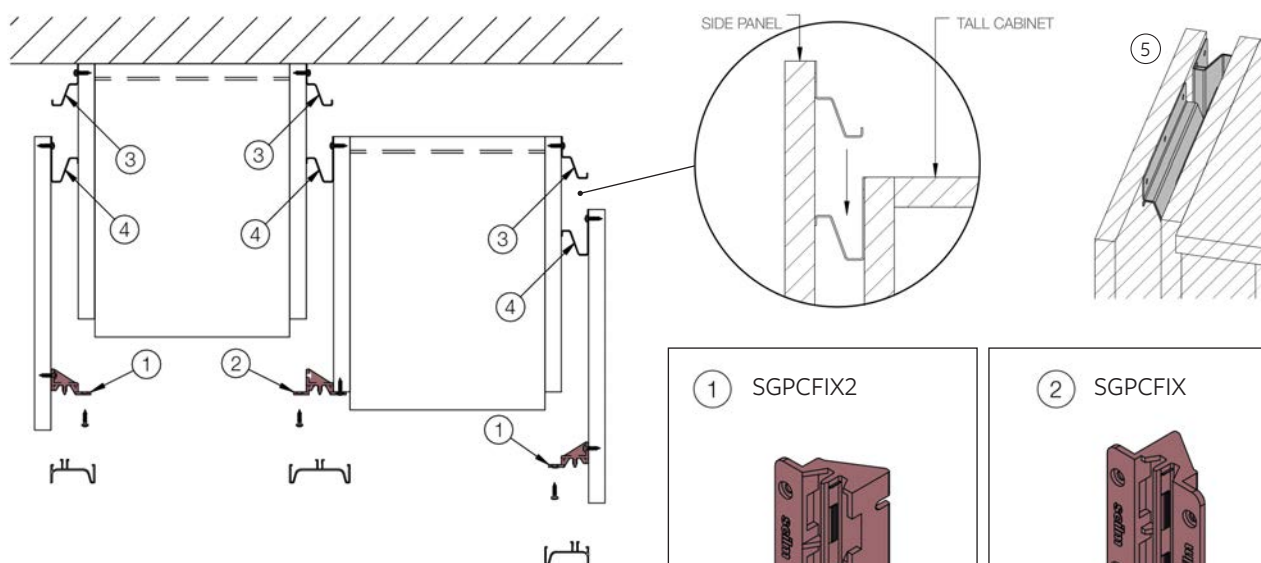

We recommend using wood screws, Ø 3.5, to fix brackets

1) Attach the fixing brackets (SGPCS) to the back edge of the cabinet (3) and side panel (4). Ensure they are flush with the back edge.
The rear bracket set can also be used as a support set for the side panel. In this case, it must be applied horizontally (5).

2) Secure the Gola fixing plates (1 & 2).

3) Place the side panels/cabinets into position.

4) Clip vertical rails into position.
